TWO IP INPUT CHANNELS

Two IP input channels enable video recording from IP cameras as well as analog cameras, thereby giving users more flexibility in recording and rearranging their existing security system.

H.264 CODEC

H.264 enables the transmission of higher-quality images at the same rate as does MPEG4. Also H.264 has a higher compression ratio than MPEG4, and can thus reduce its bandwidth and storage usage.

REAL-TIME RECORDING

Images are recorded in real-time, thus providing the best monitoring and playback environment.

Non Real-Time

Real-Time

2-WAY AUDIO

Two-way communication lets the DVR operator engage in audio communication with a manager in a remote area, thus making remote management possible.

ATM/POS LINKAGE

ATM and POS data can be stored with visual data, thereby effectively responding to financial safety accidents.
